ADDITIONAL EXPERIENCE	DevOps workshop Skills acquired <ul style="list-style-type: none">• Overview of Docker	June 2023

ADDITIONAL EXPERIENCE	Frontend developement workshops Skills acquired <ul style="list-style-type: none"> • HTML • CSS • JavaScript • Overview of ReactJS 	January 2023
PERSONAL PROJECTS	Guestbook of Events Developed a guestbook of events application using Node.js, Express.js, and Pug templating engine. The application allows users to sign in or sign up for an account, upload posts related to events, view their personal posts, add comments to posts, delete their own posts, and change their profile picture. Passwords are securely stored in a JSON file, and password verification is performed by comparing the input password with the stored password. Designed a user-friendly interface with Pug templates. Used a JSON file to store user data, posts, and comments.	September 2023
	URL Shortcut Generator Developed a URL shortcut generator application using Node.js and Express.js. The application allows users to create shortened URLs for long web addresses. Implemented RESTful API endpoints for URL creation, retrieval, and redirection. Used a JSON file to store URL mappings securely. Designed a simple web interface for users to interact with the application.	August 2023
	To-Do List App Developed a to-do list application using HTML, CSS, and JS. Implemented features such as adding, deleting tasks, as well as marking tasks as done. Utilized Node.js and Express.js for backend and JSON file for storing the tasks.	August 2023
	Newsletter sign-up form with success message A challenge from Frontend Mentor website. In this project I used HTML to structure the web page and CSS to style it. After entering a valid email address, a success message will appear instead of the sign-up form page, then go back to the sign-up form when the button is pressed. I used JavaScript for switching to the success message page and back to the sign up form, as well as for the error state.	May 2023
	Age calculator app A challenge from Frontend Mentor website. In this project I used HTML to structure the web page and CSS to style it. After entering a valid birth date, the app calculates the user's age (years, months, days). I used JavaScript for the calculations and for the error states in case of entering an invalid birth date.	April 2023
	YouTube page interface clone For this project, i tried cloning the first page of the YouTube website using only HTML and CSS, so it's a much more simpler version. I used CSS grid and flex properties.	March 2023
PROGRAMMING LANGUAGES AND TOOLS	Programming Languages: <ul style="list-style-type: none"> • C 	

- C++
- JavaScript (JS)
- Python
- Assembly
- HTML
- CSS

Development Tools:

- Node.js
- Express
- DiscordJS
- Git and GitHub
- Canva
- Figma
- Linux (Ubuntu)
- React (slight knowledge)
- NumPy
